<i>Document Title</i>	Programme for the IDMP workshop, Monday 2 May 2016, VUMC, Amsterdam, Netherlands
<i>Source</i>	ISO/TC 215/WG6
<i>Action required</i>	For your consideration

Monday 2 May 2016 VUMC, Amsterdam, Netherlands IDMP workshop

This workshop invites

- ISO/TC 215/WG 6 'Pharmacy & medicines' members and experts who work with this working group's standards on European or national level
- And any further expert

who want to become more familiar with the Identification of Medicinal Products (IDMP) series of ISO standards, to attend the workshop organized on Monday 2nd May 2016 at the VUMC in Amsterdam, Netherlands.

This series ISO standards form the core of the future required identification for medicinal products.

The MPID or Medicinal Product Identifier is the unique identifier allocated to a Medicinal Product supplementary to any existing authorization number as ascribed by a Medicines Regulatory Agency in a jurisdiction. The PhPID is the Pharmaceutical Product Identifier, which is referring to the composition of the pharmaceutical product, including one or more active and other ingredients, quantities, and characteristics at generic levels as the pharmaceutical form and the route of administration. The reference to 'Regulated' means that this series addresses those medicines that are formally approved by a medicines agency and have a marketing authorization.

Draft programme
